(54) Title: METHOD AND APPARATUS FOR EXCHANGE OF DATA OBJECTS BETWEEN NETWORK NODES DEPEND-  
ING ON TERMINAL CAPABILITY

(57) Abstract: A method and a system which provide means to enable terminal equipment that relies on network based retrieval of data objects and terminal equipment that comprises data object retrieval capability, to coexist and interact with each other on the same communication network. This is accomplished by a filtering server on the network that at least knows which terminals require network based retrieval and only gives these terminals network based data object retrieval.
